

Paediatric Continuous Ventilation Funding Criteria

The funding criteria for paediatric continuous ventilation have been developed in consultation with expert clinicians and align with evidence-based clinical guidelines available at the time of development. The funding criteria provide a basis for consistent and transparent decision making, and assist with safe and appropriate distribution of equipment. The funding criteria do not replace the need for local clinical service guidelines or prescriber clinical reasoning, and recognise that not all items that are clinically recommended will meet the criteria for funding through EnableNSW.

Part A: PAEDIATRIC CONTINUOUS VENTILATION FUNDING CRITERIA

Eligible Prescribers	Inclusions	Exclusions
Respiratory or Sleep Physician	<ul style="list-style-type: none"> - Two TGA approved community appropriate life support ventilators (identical) with internal and external batteries - One in-use carry bag or one mounting bracket per device - Standard air inlet filters <p><i>EnableNSW is required to purchase the most suitable and cost effective TGA approved life support ventilators devices from the NSW Government Contract HC18_1802</i></p>	<ul style="list-style-type: none"> - Masks & chinstraps - Antibacterial/antiviral filters - Power generators or other uninterrupted power supply equipment - Ventilator car chargers/adaptors - Ventilators solely for transport - Phrenic nerve stimulation products - Nebulisers and associated consumables - External monitoring systems (e.g. pulse oximeters, CO₂ monitoring)

DEFINITION OF CONTINUOUS VENTILATION AND APPLICATION REQUIREMENTS

This clinical funding criteria refers to infants, children and young people up to 18 years of age, with a demonstrated need for long term continuous (life support) ventilation in the community. For the purposes of this document, continuous (life support) ventilation is defined as requiring ventilation ≥ 16 hrs/day. To support the request for continuous ventilation equipment, the clinical team must provide a comprehensive report (including objective evidence e.g. copies of tests and complete prescription settings) detailing EACH of the following categories (1-5);

1. Diagnosis and clinical letter
2. Demonstration of requirement for continuous (life support) ventilation
3. Demonstration of stability on the prescribed life support ventilator
4. Community safety, carer training and emergency plan
5. Ventilator settings

A1. DIAGNOSIS AND CLINICAL LETTER

<p>Diagnosis + letter</p> <p>Prescriber must provide:</p> <p>AND</p>	<p>Recent letter from Paediatric Respiratory/Sleep Physician outlining:</p> <ul style="list-style-type: none"> - Primary cause of respiratory failure, other relevant comorbidities or history, including relevant diagnostic information (e.g. PaCO₂ ≥ 45mmHg on arterial or capillary blood gas, CO₂ ≥ 50mmHg on venous blood gas) or sleep studies - Confirmation that the child is clinically stable on the prescribed ventilation mode and settings - Confirmation of who will be responsible for ongoing clinical review of the child

Paediatric Continuous Ventilation Funding Criteria

The funding criteria for paediatric continuous ventilation have been developed in consultation with expert clinicians and align with evidence-based clinical guidelines available at the time of development. The funding criteria provide a basis for consistent and transparent decision making, and assist with safe and appropriate distribution of equipment. The funding criteria do not replace the need for local clinical service guidelines or prescriber clinical reasoning, and recognise that not all items that are clinically recommended will meet the criteria for funding through EnableNSW.

A2. DEMONSTRATION OF REQUIREMENT FOR CONTINUOUS (LIFE SUPPORT) VENTILATION	
Prescriber must confirm the following: AND	Confirmation that the child's requirement for continuous (life support) ventilation in the community has been assessed during a period of clinical stability i.e. not during or immediately recovering from an acute illness AND The child has respiratory insufficiency which has resulted in the need for respiratory support for ≥ 16 hours per day, with significant periods of awake time on ventilation, and where no further weaning of daytime ventilation is indicated or possible.
A3. CONFIRMATION OF COMMUNITY EQUIPMENT TRIAL AND NEED FOR CONTINUOUS (LIFE SUPPORT) VENTILATION	
Prescriber must confirm/provide the following: AND	Confirmation that the child has trialed the prescribed community appropriate life support ventilator and associated accessories/consumables for at least one week, and the equipment is suitable for the child's ongoing use in the community AND Provide compliance download demonstrating usage of the prescribed community appropriate life support ventilator ≥ 16hrs/day over a 1-2 week period
A4. DEMONSTRATION OF STABILITY ON THE PRESCRIBED LIFE SUPPORT VENTILATOR	
Prescriber must provide: AND	Ventilation titration polysomnogram (PSG) demonstrating adequate control of gas exchange on prescribed ventilation mode and settings (See B1 for more information on requirements)
A5. COMMUNITY SAFETY, CARER TRAINING AND EMERGENCY PLAN	
The prescriber must confirm ALL of the following: AND	A risk assessment in the community has been conducted and documented and the child can be safely managed on the prescribed equipment in the community AND The child and family/carers have received adequate training, and have acknowledged the risks and responsibility for safely managing the child and the equipment in the community AND An individual care plan and an emergency plan have been documented and communicated to the child and their family/carers, to manage clinical and equipment emergencies and to allow the child to live safely in the community

Paediatric Continuous Ventilation Funding Criteria

The funding criteria for paediatric continuous ventilation have been developed in consultation with expert clinicians and align with evidence-based clinical guidelines available at the time of development. The funding criteria provide a basis for consistent and transparent decision making, and assist with safe and appropriate distribution of equipment. The funding criteria do not replace the need for local clinical service guidelines or prescriber clinical reasoning, and recognise that not all items that are clinically recommended will meet the criteria for funding through EnableNSW.

A6. VENTILATOR SETTINGS

The prescriber must provide:	<p>Complete prescription settings for the requested ventilator*, signed and dated by the requesting physician, including:</p> <ul style="list-style-type: none"> - If dual/multiple programs are prescribed, an individual clearly labelled script is required for each program - For each program, the script must contain <ul style="list-style-type: none"> - Name and date of birth of the child - Ventilator mode & complete settings - Alarm settings - Signature of the prescribing physician - Script date <p>*Please provide script for specific ventilator (templates available here). Please provide complete settings to avoid delays in provision of equipment</p>
AND	

A7. URGENT REPAIRS AND ROUTINE SERVICING

The prescriber must provide:	<p>Confirmation that the prescriber agrees to provide a new script with current settings, current date, and physician signature in a timely fashion when requested by EnableNSW, which are required to proceed with urgent repairs or routine servicing of life support ventilators.</p> <p>AND</p> <p>Name, role, email and phone number of individual/s AND an alternate monitored contact email and phone number for EnableNSW to contact to obtain new script (signed and dated by the prescribing physician) in the event of urgent repairs or routine servicing, or if clinical input is required.</p>
------------------------------	---

HUMIDIFICATION, VENTILATOR CIRCUITS AND ACCESSORIES FOR USE WITH CONTINUOUS LIFE SUPPORT VENTILATORS

Children who meet the criteria for continuous (life support) ventilators are eligible for the following equipment and consumables (refer to [Paediatric Suction Units, Electrical Humidification and Respiratory Consumables Funding Criteria](#) for allocations):

- Two humidifiers with associated electrical adaptors and temperature probes
- Test Lung for people who are invasively ventilated continuously
- Manometer for people with a cuffed tracheostomy
- Manual resuscitator
- Ventilator circuits (wet and dry)
- Ventilator circuit accessories e.g. catheter mount, connectors and elbows, adaptors etc.
- Water bags
- Mouthpiece ventilation circuits

Paediatric Continuous Ventilation Funding Criteria

The funding criteria for paediatric continuous ventilation have been developed in consultation with expert clinicians and align with evidence-based clinical guidelines available at the time of development. The funding criteria provide a basis for consistent and transparent decision making, and assist with safe and appropriate distribution of equipment. The funding criteria do not replace the need for local clinical service guidelines or prescriber clinical reasoning, and recognise that not all items that are clinically recommended will meet the criteria for funding through EnableNSW.

PART B: ADDITIONAL CLINICAL INFORMATION AND REQUIREMENTS

B1. Requirements for PSG studies	<p>The following documentation is required for all PSG studies treatment studies:</p> <ul style="list-style-type: none"> • A physician report and recommendation based on the study AND • Full technical report of the study
B4. Complete settings are required to set up the ventilators	<ul style="list-style-type: none"> • Complete settings are required in order to avoid delays in the child's life support devices being set up and delivered. • Proforma scripts are required to ensure all of the settings for the specific prescribed device are provided initially. Please contact device suppliers for additional technical information and support around mandatory settings and scripts.

PART C: PRESCRIBER RESPONSIBILITIES, ONGOING REQUIREMENTS

C1. Ongoing clinical review, ongoing contact requirements, obtaining settings for repairs	<ul style="list-style-type: none"> • In line with clinical best practice guidelines, EnableNSW expects that children using EnableNSW continuous life support ventilators are regularly reviewed by their respiratory/sleep physician to ensure they continue to be on the optimal treatment. • As the prescriber of this equipment, the respiratory/sleep physician agrees to: <ul style="list-style-type: none"> - Provide current contact details, and alternative contact details for clarification of clinical information or other ventilator equipment updates for the child. - Provide EnableNSW with updated contact information if there are any changes. • Provide up to date life support ventilator settings (as outlined in A6) to EnableNSW Repairs & Maintenance Team on request- these are required for any repairs to be initiated.
C2. It is the responsibility of the prescribing physician/clinical teams to submit/organise and ensure the following:	<p>Training, safety, and repairs:</p> <ul style="list-style-type: none"> • The child and family/carers are trained and are capable of using the equipment safely and appropriately, including basic equipment care and minor troubleshooting. • The child and family/carers are trained how to regularly clean and inspect the ventilation equipment, and safely store and transport the equipment (e.g. empty the humidifier chamber before transporting the equipment). • The child's family/primary carer should retain a copy of current ventilator prescription settings. • The child and family/carers should work with the prescribing physician to ensure that they comply with device usage, and must be informed that therapy compliance data will be recorded by the clinical service. • Provide the child and family/carers with information about their treatment plan, ongoing clinical review and assessment requirements in relation to their ventilation treatment. • EnableNSW can be contacted to coordinate repairs and/or replacement within business hours (9am-5pm, Monday to Friday). EnableNSW and contracted equipment suppliers do not provide a 24 hour equipment support contact line.

Paediatric Continuous Ventilation Funding Criteria

The funding criteria for paediatric continuous ventilation have been developed in consultation with expert clinicians and align with evidence-based clinical guidelines available at the time of development. The funding criteria provide a basis for consistent and transparent decision making, and assist with safe and appropriate distribution of equipment. The funding criteria do not replace the need for local clinical service guidelines or prescriber clinical reasoning, and recognise that not all items that are clinically recommended will meet the criteria for funding through EnableNSW.

	<ul style="list-style-type: none"> The child’s family and carers must be aware of the procedure to follow in the event of ventilation equipment failure, and have a plan in place for ventilation equipment failure outside of business hours. The child’s family/carers must have contact details for their clinical team. Any concerns about the child’s ventilation management or health condition must be discussed with the clinical team. <p>Equipment and environment factors:</p> <ul style="list-style-type: none"> Ensure the ventilation equipment prescribed is compatible with the child’s home environment and all other equipment or consumables prescribed, and is suitable for safe management of the child in the community. Ensure that the child’s place of residence has access to a stable electrical power source that is sufficient for device operation The clinical team must notify EnableNSW if the equipment is no longer required. A NSW Government Planning & Environment Electricity Rebate Form is completed: https://www.service.nsw.gov.au/transaction/apply-life-support-energy-rebate-retail-customers
C3. Equipment allocation	<ul style="list-style-type: none"> Available equipment that meets the child’s assessed requirements may be either reallocated or new.
C4. Availability of new ventilation ventilator models, modes or features	<ul style="list-style-type: none"> EnableNSW will not exchange functioning ventilation or humidifier equipment on the basis of newer device models, modes, or new or updated features becoming available.
